Lightroom Bitesize: Keyboard Shortcuts

This Lightroom Bitesize tutorial isn't really a tutorial at all – it's a small list of the common 'one-key' shortcuts that I use on a regular basis.

There is a huge number of keyboard shortcuts - and any number of guides on the internet to download. But it's far simpler to just press 'Ctrl ?' when using Lightroom to see an on-screen display of the common shortcuts for the module you are currently using. However, many require using simultaneous key presses which are sometimes more trouble than using the mouse – so I just use the single key shortcuts. Note that these are the same for Windows and Mac.

Shortcuts are based on Lightroom 5. Some may not work with previous versions.

Using the 'table tent' of shortcuts.

Print this page out – preferably on some A4 photo paper or card.

Simply cut around the periphery of the dotted area to the right so that you end up with a long rectangle.

Crease along the middle.

Crease the two end flaps and then fix together with glue or double-sided tape to create a 'tent' which you can stand on your table or desk as a constant reminder. You can use the reverse blank space for your own notes of favourite shortcuts.

Stick to
the opposite end to create a base

General workspace

Go to Grid View	G
Go to Loupe view	E
Cycle information display	I
Go to Compare view	C
View full-screen	F
Cycle Lights-Off modes	L

Library Module

Flag (Pick) image	P
Un-flag image	U
Reject image	X
Delete image	Delete

Develop Module

Cycle before/after preview	\
Left/right = before/after preview	Y
Show shadow & highlight clipping	J
Cycle crop overlay	O
Increase brush / spot size]
Decrease brush / spot size	[
Hide spots or pins	H

Place double-sided tape or glue on here and stick to
the opposite end to create a base.
